

*“Only Cure Medical offers **exceptional products** for a better today while **supporting research** for a cure – to help ensure an even brighter tomorrow!*”

Bob Yant, Cure Medical founder and Cure Catheter® user

The Cure Medical Commitment to donate 10% of net income to research for a cure for spinal cord injury and central nervous system disorders is unsurpassed in the industry. As a result, when you use any Cure Medical product for routine intermittent catheterization you experience the benefits of using an exceptional product while joining in the efforts to secure a promising future.

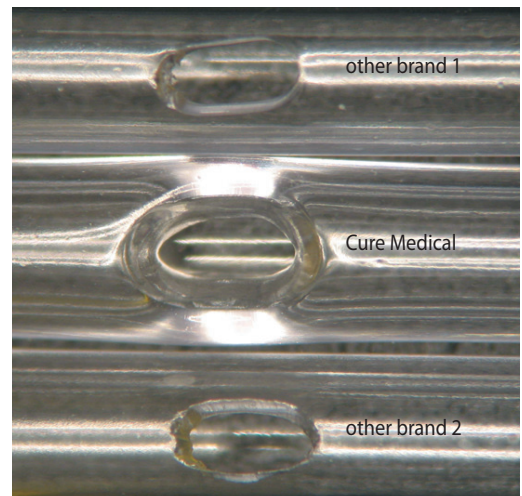

Cure Medical offers ideal solutions for people on the go – such as the **Cure Twist™** for women and the U-shaped **Cure Medical® Pocket Catheter** for men. In addition, Cure Medical offers the **Cure Catheter®** with options for hydrophilic coating and dual open packaging. The unisex **Cure Catheter® Closed System** enables sterile catheterization using a pre-lubricated catheter tip with integrated 1500 ml collection bag.

All Cure Medical products feature polished eyelets for increased comfort. High magnification Scanning Electron Microscope (SEM) imaging of an eyelet on two national brand catheters and a Cure Medical catheter reveals differences in quality that can be seen and felt.

*I am sure that the **polished eyelets** on the Cure Catheter are the reason why it comes out smooth. Others I have tried felt like they scraped me.*

Cure Medical product user

Additionally, to help ensure user safety, comfort and peace of mind, Cure Medical products are not made with DEHP* nor natural rubber latex.

Visit **www.curemedical.com** to request **FREE** product samples or to obtain information on exciting scientific advances achieved at research centers supported by Cure Medical.

I love them! I cath like I am supposed to now because it doesn't hurt anymore ... Thank You! Cure Medical product user

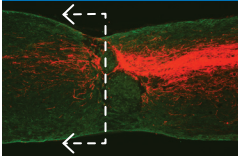

Research is the key.

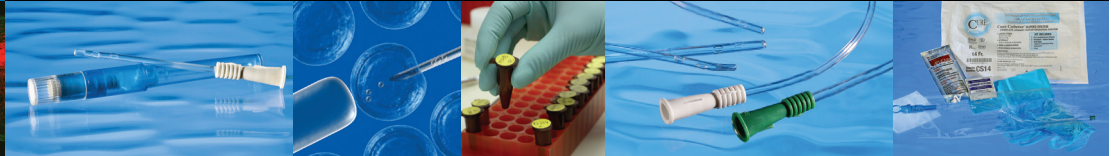

Cure Medical is proud to be supporting research that for the first time has regenerated the corticospinal tract.

Cure Medical believes that research is the key to finding a cure for spinal cord injuries and central nervous system disorders. To that end, Cure Medical has made a permanent Cure Commitment to donate 10% of net income to multiple advanced medical research facilities nationwide, in pursuit of a cure for spinal cord injuries and central nervous system disorders.

Use of any Cure Medical product helps support medical research.

The above image shows a cross section of an injured mouse spinal cord stained green. CST nerves, stained red, can be seen growing beyond the lesion site. This indicates successful regeneration and offers hope for a cure for CNS/D in humans.

Going beyond

Supporting research isn't the only Cure Medical distinctive. Product material choices and manufacturing decisions set Cure Medical apart from others as well.

Di(2-ethylhexyl)phthalate (DEHP) is often used by other manufacturers as an economical means for making catheters flexible. DEHP is included on a published list of chemicals known to cause cancer and reproductive harm per the state of CA – therefore, Cure Medical products are not made with it.

Natural rubber latex is a chemical which commonly causes irritation and can cause life-threatening allergic reactions – therefore, Cure Medical products are not made with it.

By investing in advanced technology and selecting high quality materials for manufacturing, Cure Medical helps ensure that users experience maximum safety, comfort and peace of mind.
